📌 Task 7: Remediation and Recommendations

Identified Vulnerabilities & Fixes:

1. vsftpd 2.3.4 – vulnerable backdoor

Fix: Upgrade to vsftpd 3.0.5

2. OpenSSH 4.7p1 – outdated, brute-forceable

Fix: Upgrade to OpenSSH 9.6

3. Java RMI Service – allows remote execution

Fix: Disable or firewall restrict access

📌 Major Learnings

- Applied Nmap for full-range scanning and OS detection.
- Understood enumeration and real-world exploitation techniques.
- Gained skills in privilege escalation and hash cracking.
- Learned how to evaluate vulnerabilities and apply proper remediation.

⚠ This project simulates a real-world penetration test using open-source tools and is intended strictly for educational purposes.
